Description

Combined with an alluring formulation, Advion Fire Ant Bait ensures control of imported fire ants in 24-72 hours - for entire colony control - fast.

ADVION fire ant bait should be applied at the first sign of fire ant activity. Applications can be made at any time of day, but are most effective when ants are actively foraging, usually when the soil surface temperature is above 60degrees F.

For broadcast treatments, broadcast 1.5 lbs/acre (0.5 oz/1000 sq.ft.) up to 4 times per year.

Up to 4 applications per year of ADVION fire ant bait may be applied per year. These are generally applied at 12 to 16 week intervals. However, excessive moisture soon after application can reduce effectiveness and necessitate re application sooner.

For mound treatments, use 4 tablespoons (2 oz) per mound, uniformly distributing 3-4 feet around the mound. Retreat after 12-16 weeks if needed. Do not disturb mound. Do not apply to tops of mounds.
